

CensorNet

Internet Management Software for SOHO, SME and Corporate

CensorNet is the ultimate tool for managing employee access to the Internet and provides a powerful yet cost effective way to enforce a corporate Internet Usage Policy.

Increase Productivity • Reduce Legal Liability • Instant ROI • Protect Digital Assets

CensorNet is Linux based Internet Management Software designed to control and monitor individuals accessing Internet resources on a local or wide area network. CensorNet is *the* open-source alternative to commercial filtering solutions, which are aimed at the higher end of the market and often impose costly licensing fees.

"78% of Internet porn traffic is downloaded between 9am and 5pm"
-- *SexTracker*

"30 to 40% of employees Internet activity is not business related, costing employers millions of dollars in lost productivity."
-- *IDC*

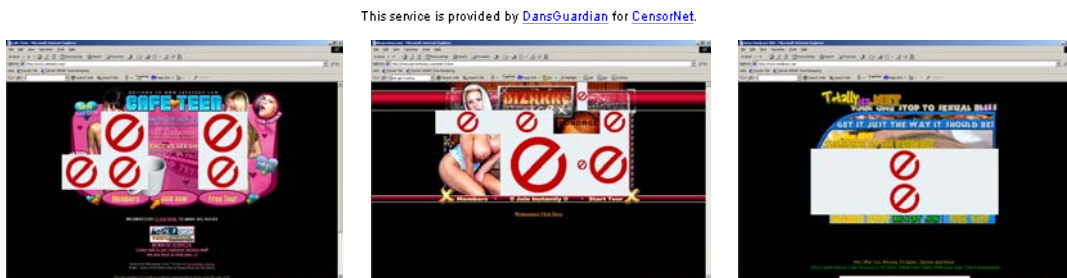

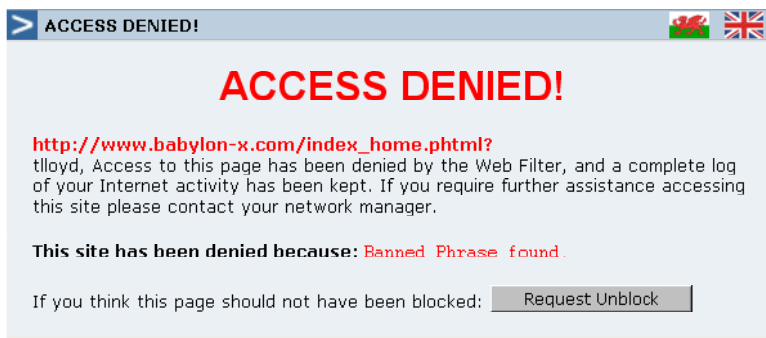

"70% of employees admit to viewing or sending adult-orientated personal e-mail at work."
-- *NFO Worldwide*

"37% of employees report that they search for jobs, 45% make travel arrangements, and 11% play online games while at work." -- *Vault.Com*

"CensorNet is an excellent product allowing precise control and regulation of our Internet feed."
-- *Pensby Boys High School*

"46 percent of online holiday shopping is happening at work."
-- *NetRatings*

"Excellent, definitely recommended to others. If you want to know exactly who is surfing what on the net at any time this is the software for you."
-- *Halewood Community Comprehensive School*

Example Pornographic Web Site with CensorNet Image Filtering Module

Key Features

- **Content Control** – CensorNet offers complete control over how your Internet connection is filtered. Block your own sites, keywords, file type filters or image content at the click of a button.
- **User Control** – Allow, deny, suspend, schedule, wall garden or restrict bandwidth on a per user or group basis.
- **Workstation Control** – turn on or off access to the Internet from specific workstations or entire rooms.
- **Comprehensive Reports** – complete audit trail of every user. Search by user, by site, by date range, view Internet traffic trends by day, month or hour, view top 30 sites and view which users are online at any one time.
- **Image Filtering** – block unsuitable images before they reach the Web browser using state of the art Image analysis technology.
- **Automatic Updates** – daily automatic updates to the banned site list.
